Salt Lake City, Utah 84116

Dear Mr. Suchowski,

I am enclosing an inter-office memo concerning a field trip made by you to the John and South Lisbon mines in mid-1980 with our Manager, Mr. Carl Lipp.

In the second paragraph, it states that the waste pile at South Lisbon may remain instead of moving it. We would like confirmation of this deferral from our original notice of intent. It would be beneficial to both our economic status and the condition of the land located at South Lisbon, in that with the growth surrounding the mine, moving a stockpile will disturb more than if it was left to provide vegetation.

I don't know if some fertilization is needed, pending a soil analysis, and we would accomodate the recommendations posed by the Soil Division.

Would you please provide written confirmation of this aspect. We intend to start reclaiming this mine in December, and your early response is appreciated.

Sincerely yours,  
MINERALS RECOVERY CORPORATION

MEMORANDUM

To: Eric Newman  
John File  
South Lisbon File

From: Carl Lipp

Subject: Visit to John mine with Tom Suchowski; Utah, Oil, Gas  
and Mining Division

On Thursday, June 5, 1980 I met with Tom Suchowski who represents the State of Utah Oil, Gas & Mining Division. The purpose of the visit was to physically inspect the area of proposed mining activities at the John mine. His main comment was that we should fill out a Declaration of Exemption (DOE form) stating that we will not disturb over 2 acres. He said he could not see why we would disturb over 2 acres and there should be no problem with our proposed mining plan. He will mail these forms to us to be filled out and returned.

We also discussed the waste pile at South Lisbon. Tom said that we could contour it and keep the slopes at 2 1/2 or 3 to 1 and seed it. There would be no reason to move it.
